

What we want

Environmental management, disaster reduction and climate change adaptation are cross-cutting issues. Capacity building and awareness raising is the basis for any actions undertaken to reduce environmental, disaster and climate change risks posed to communities and development efforts. Addressing the lack of technical expertise, education and information regarding environmental & disaster risk management, and climate change adaptation, CCDR will provide a significant added value to make development initiatives fully sustainable.

The **Centre for Climate Change and Disaster Reduction** contributes to diminishing the impacts of disasters and climate change in Tajikistan and Central Asia by supporting the professionals, public and local/international organizations to better understand environmental, disaster and climate change risks and how to reduce them. CCDR activities range from technical / public education to technical support for planning and implementing risk reduction measures.

The **overall goal** of the CCDR is to contribute to safer life and livelihood in Tajikistan and Central Asia through provision of education, consultancy and information on environmental management, disaster risk reduction and climate change adaptation.

Specifically, it is aimed:

- to enhance the capacity of professionals and practitioners to assess and manage risks
- to make development activities more sustainable, by being resistant and
- to save life through increased public awareness.

*"Towards climate resilience of
mountain communities".*

Who we are

Centre for Climate Change and Disaster Reduction (CCDR) is a non-profit and non-governmental organization based in Tajikistan. It brings together some of the best researchers and experts on Climate Change, Disaster Reduction and Environment as well as from other disciplines to enable sustainable development for improved and equitable resilience through knowledge and regional cooperation.

Our vision

Tajikistan people (men, women, and children) enjoy living in healthy and sustainable environment with its neighboring countries.

Our mission

To foster Tajik society action on climate change, disaster reduction and environment through rigorous, innovative research and capacity building

What we do

We address the **Climate Change Adaptation (CCA)**, **Disaster Risk Reduction (DRR)**, & **Environmental Management (EM)** through:

- **Capacity building** of professionals and practitioners (trainings, specialized courses)
- **Knowledge management platform** (knowledge/experience/information exchange, liaison for international organisations and various stakeholders (i.e. community of practice, development/dissemination of best practices, video development; access to scientific/research programs, grants, scholarships for young researchers etc.).
- **Mainstreaming** CCA/DRR/EM (provision of consultancies and education)
- **Concept development** (design strategies and proposals, concepts and action plans)
- **Impact assessment and reviews** (programmes and projects evaluation and assessment)

How we work

CCDR applies a multi-stakeholder and trans-disciplinary approach based on local, regional and international partnerships and good practices. CCDR develops, adapts and implements innovative and effective tools with an emphasis on capacity building and awareness rising of professionals, public and local institutions. The quality of projects ensured through CCDR Technical Advisory Group (TAG) consisting of international and local experts
